

гексагональная ячейка Вороного, $|N(x)| = 6$

The diagram shows a honeycomb lattice of blue lines. A central hexagonal cell is highlighted in light orange. This cell is defined by six vertices, each marked with a black dot. These vertices are the centers of the six adjacent hexagonal cells. A red dot is located at the center of the orange cell. Six red dotted lines radiate from this central red dot to each of the six black vertices. One of the edges of the orange cell is marked with a blue arrow pointing towards the top-right vertex, labeled with the equation $a = h_L$.

$$a = h_L$$

соседи на расстоянии h_L за один такт h_T
